ABOUT ME

QA Automation Engineer with hands-on experience in Python, Pytest, Playwright, and Selenium across full-stack applications. Proven track record of building test infrastructure from scratch, automating E2E and regression testing, and integrating quality gates into CI/CD pipelines. Keen interest in life sciences and bioinformatics, eager to apply testing expertise in a domain that drives real impact in precision medicine and drug development. ISTQB certified.

PROJECTS

AI Native SaaS platform

- Sole QA engineer for an AI-native coaching SaaS platform built with React, TypeScript, and TanStack
- Implemented QA procedures and processes for the team, including structured test workflows and a PR-based QA handoff system
- Built a GitHub Actions bot to automate QA labeling and streamline the pull request pipeline
- Performed manual exploratory, smoke, and regression testing across the full product during active development
- Identified and resolved UI defects directly in the codebase, aligning components to Figma design specifications
- Established a Playwright E2E testing framework with page object model architecture and automated login flows
- Implemented test user lifecycle management and database seeding for reliable test environments
- Developed automated data-testid attribute generation on production components to enable stable test selectors
- Validated backend logic including subscription flows and third-party API integrations

Automation Frontend E2E Testing - Web

- Developed and executed automated E2E, Smoke, Regression, and Integration tests for a desktop back office application using **Selenium** and **Python**, concentrating on user management, parking space reservation scheduling, electric vehicle charging, and the rental of electric bikes and scooters.
- Developed and executed automated E2E, Smoke, Regression, and Integration tests for a desktop back office application using **Selenium** and **Python**, concentrating on user, dealership, machine, dealer, and client management.
- I developed an automated test suite for **visual regression testing** of a web-based platform, focusing on **UI validation without DOM access**. Using **OpenCV** for **image comparison and template matching**, **BeautifulSoup** for parsing, and **Selenium** for browser automation, I integrated **Python** libraries like **Requests** and **Pytest** for HTTP interactions and test orchestration. The suite employed image processing, **ROI detection**, and string parsing to ensure visual consistency in UI components, minimizing manual QA efforts and quickly identifying visual discrepancies across releases.

Automation Frontend E2E Testing - Mobile

- Developed and executed automated end-to-end (E2E) tests for a **mobile** app using **Appium** and **Python**, with a focus simulating user interactions.
- Built and maintained a robust test **automation** framework using **Pytest** and the **Page Object Model (POM)** design pattern, enabling efficient and scalable test execution.
- Integrated automated tests into the **CI/CD** pipeline, ensuring continuous validation of app functionality with each deployment.

Backend Automation E2E Testing

- Developed and executed automated end-to-end (E2E) tests for backend services using **Python** and **Requests**, ensuring the reliability and performance of **APIs** involved in reservation scheduling, vehicle charging, rental services, permissions, clients, machines, dealers, and dealerships.
- Designed and implemented a test automation framework with **Pytest**, enabling comprehensive and efficient testing of backend functionalities.
- Conducted thorough validation of **RESTful APIs**, focusing on response accuracy, data integrity, and performance under various conditions.

WORK EXPERIENCE

■ Evolvewell d.o.o. (2025 Aug - present)

QA Engineer

- Frontend Bug Fixing & UI Polish
- E2E Test Infrastructure
- QA Process Automation
- Backend Validation
- Manual QA
- Test Tool Development
- Web App Frontend Testing – Automation
- Web App Frontend Testing – Manual

■ Sigmoid d.o.o. (2022 Aug - 2025 Jul)

QA Automation Engineer

- Web App Frontend Testing Manual/Automation
- Test Tool Development
- API Testing
- Mobile Frontend Testing Manual/Automation
- Visual Regression Testing

■ Upwork (2021-2022)

QA Manual Tester

- Tested Mobile Apps
- Data Sheet Validation
- Frontend Functional Testing

SKILLS

■ Python	JavaScript	Security Testing
PyTest	TypeScript	OWASP Top 10
Selenium	Playwright	Requests
OpenCV	Appium	GitHub Actions
PostgreSQL	Postman	BeautifulSoup
■ Linux	Swagger	Pandas (used it a bit)

EDUCATION & CERTIFICATIONS

■ ISTQB

Foundation Level Certified Tester

■ Harward Univesrity

CS50 - Computer Science (online)

■ Faculty of Technical Sciences, University of Novi Sad

Computer Graphics in Engineering
